Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Response to Arguments

Applicant's arguments, filed May 7, 2004 and entered into the record with the filing for the request for continued examination filed on July 7, 2004, with respect to the rejection(s) of claim(s) 1-22 and 25 under 35 USC 102(b) and 103(a) using Schofield et al. and Hemming have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Pothier.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 and 14-15 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Pothier.

Pothier teaches a device for measuring the characteristics of an antenna (30) under test comprising a probe mount (66) on which a support (54) is fastened, a wave reception element (42) and a reflective screen (80) mounted on the support the wave reception element being located between the screen and antenna, and where the screen reflects radiation away from the probe mount as recited in claims 1 and 14.

Pothier further teaches a reflective screen and device formed around a centrally defined axis of symmetry defined by Item 36 as recited in claims 2 and 15.

Art Unit: 2881

Allowable Subject Matter

Claims 3-13 and 16-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
